

Academic Augments

The CleanTech Concentration prepares students for careers in renewable energy, energy efficiency, and emissions abatement.

This field is one of the fastest growing employment areas for MBAs.

Clean technology companies are seeking MBAs who not only have excellent business skills but also a solid understanding of the technology and policy aspects affecting their industry, as well as project and risk management skills.

Accordingly, the CleanTech Concentration at McCombs gives students the opportunity to combine courses across various schools to best prepare for their career of choice.

McCombs MBAs will also connect with Austin's booming CleanTech industry through the Clean Energy Incubator and a variety of on- and off-campus opportunities.
