

Investment Banking

Investment bankers help companies raise capital, in private and public capital markets, provide strategic financial advice, and facilitate M&A. A comprehensive understanding of financial statement analysis, financial forecasting and modeling, valuation, corporate strategy, flow-through taxation, and strong professional communication skills are required. A strong understanding of finance, to complement accounting knowledge, is also necessary. Many investment bankers move on to opportunities in Private Equity such as operating company management, restructuring, and wealth management.

Beneficial Professional Designations

- CPA
- CFA

Sampling of Employers Hiring our Students
