The Healthcare concentration prepares students for careers in the healthcare, life science, and biotech industries. These industries are dynamic and constantly evolving. Healthcare companies are seeking MBAs who not only have excellent business skills but also a solid understanding of the technology and policy aspects affecting their industry, as well as the opportunities and challenges within the industry. Accordingly, the Healthcare concentration at McCombs gives students the opportunity to combine courses across various schools and disciplines to best prepare for their career of choice. Texas MBAs will also connect with Austin’s booming Biotech industry through the Austin Technology Incubator, American College of Healthcare Executives, and a variety of on- and off-campus opportunities.
