SUPPLY CHAIN & OPERATIONS MANAGEMENT
Texas Full-Time MBA Concentrations

MBA graduates with a concentration in Supply Chain and Operations Management can have a number of career opportunities available to them. They are well prepared to work as supply chain analysts, project managers, logistics managers, operations consultants or as managers of manufacturing or service operations. Consulting firms value the analytical skills that are developed in the area of supply chain management. This concentration can be particularly valuable when combined with skills in marketing or finance.

The Supply Chain and Operations Management concentration takes a strategic and application-oriented view of a firm’s operations and resources. In addition to the core course in operations, electives are offered in areas such as supply chain management, project management, supply chain analytics, and service operations management. A practicum course is also offered that affords students an opportunity to interact with the industrial partners of the University of Texas Supply Chain Consortium to solve real business problems.
