

**Managing Complexity (MIS 382N.5)
Spring 2010 Syllabus and Course Schedule**

Unique number: 03750
Meeting time: MW 8:00 – 9:30 a.m.
Meeting location: GSB 3.138

Professor: Reuben R. McDaniel, Jr.
Office: CBA 6.454
Office phone: 512.471.9451
Home phone: 512.345.0006
Office fax: 512.471.0587
Email: reuben.mcdaniel@mcombs.utexas.edu
Office Hours: Tuesdays 9:00 a.m. - 12:00 noon

TA: Rory Kip Anderson
Email: rory.anderson@mba10.mcombs.utexas.edu

Description:

Modern organizations can be understood as complex adaptive systems. This understanding leads us to new insights about managing these systems, particularly the role of information and information systems in this task. The purpose of this course is to explore these new insights. We will discuss salient management implications of complex adaptive system theories with particular attention to specific prescriptions for information systems.

Basic characteristics presented to managers by the fact that organizations are complex adaptive systems include the fundamental unknowability and unpredictability of the world, the importance of nonlinear relationships in defining reality, and the role of self-organization, emergence, and co-evolution in organizational dynamics. We will emphasize sense-making, learning, improvisation, thinking about the future, and designing and managing relationships as substitutes for traditional activities of command, control, prediction and planning when managing complex adaptive systems. We will also discuss the role of leadership in complex adaptive systems. Managerial strategies that depend on a fairly detailed knowledge of the present situation as well as the ability to make reasonable forecasts of a future situation are less useful than in the past. Fortunately, complexity science offers some ways of better understanding these uncertain situations.

The course is designed for advanced MBA students, particularly those interested in consulting and/or problem solving roles in complex organizations and for Ph.D. students who are exploring new frameworks for investigation of organizational phenomenon. There are no prerequisites other than graduate standing but this course is not recommended for first year master's degree students.

Course Expectations:

The primary source documents are a set of readings that enables us to explore basic concepts of complex adaptive systems theories and their usefulness in understanding organizations. Readings explore key managerial approaches suggested by these theories. Course readings are available from the University Duplicating Service in the GSB Distribution Center. Additional readings may be distributed during the semester.

Each student is required to complete a major paper. The paper may be on any topic of the student's choosing; however, it must demonstrate to the instructor that the student understands the material of the course. Class discussion and readings through the material on relationships should be covered in the final paper. In order to receive an A on this assignment, it should include some ideas about complex adaptive systems and their management that extend beyond the material covered in the course. The length of the paper is dependent upon the topic chosen and the student's writing skill. In the past, papers have been about 25-40 pages in length. The paper is due at the beginning of class on **Wednesday, May 5, 2010**. *The major paper will count for 50% of the final grade.*

Each student is required to prepare a written discussion of two articles – one from the first section of the course and one from the second. The papers should not summarize the article. Rather, they should show how the article relates to other articles assigned for this course and to other scholarly material the student may be familiar with. You may use information from your previous life experiences to enhance the discussion. The purpose of the discussion is to put the chosen article in a rich framework and to facilitate the understanding of the article. These discussion papers should be no more than 7 pages (doubled spaced) and should be emailed to the class and the instructor, using Blackboard, **24 hours before** the class period that the chosen article is assigned. The papers are graded on a scale of 8-13 and 1 point will be deducted from papers that are late. .
Discussion papers together will count for 25% of the final grade.

Students will be assigned two readings from the readings listed in the syllabus - one from the set of readings marked "A" and one from the set of readings marked "B". In order to facilitate the assignment of readings, each student is asked to submit to the course TA a choice of two "A" papers and two "B" papers that they would like to review. Email these choices to rory.anderson@mba10.mcombs.utexas.edu before midnight **Saturday, January 23**. Every effort will be made to accommodate your choices. We plan to email assignments by the end of the day, Monday, January 25.

Class discussions will be based on the assigned readings and on the issues that students raise in written discussions of the readings. Attendance is required and you are expected to read all required readings before the class in which they are to be discussed. If you must miss a class, please be sure to notify the instructor by email before the class that you miss. Remember, when you miss a class, assigned work must be turned in before the class missed and your participation expectations for that day must be made up in subsequent classes. *Class participation will count for 25% of the final grade.*

McCombs Classroom Professionalism Policy

The highest professional standards are expected of all members of the McCombs community. The collective class reputation and the value of the Texas MBA experience hinges on this.

Faculty are expected to be professional and prepared to deliver value for each and every class session. Students are expected to be professional in all respects.

The Texas MBA classroom experience is enhanced when:

- **Students arrive on time.** On time arrival ensures that classes are able to start and finish at the scheduled time. On time arrival shows respect for both fellow students and faculty and it enhances learning by reducing avoidable distractions.
- **Students display their name cards.** This permits fellow students and faculty to learn names, enhancing opportunities for community building and evaluation of in-class contributions.
- **Students minimize unscheduled personal breaks.** The learning environment improves when disruptions are limited.
- **Students are fully prepared for each class.** Much of the learning in the Texas MBA program takes place during classroom discussions. When students are not prepared they cannot contribute to the overall learning process. This affects not only the individual, but their peers who count on them, as well.
- **Students respect the views and opinions of their colleagues.** Disagreement and debate are encouraged. Intolerance for the views of others is unacceptable.
- **Laptops are closed and put away.** When students are surfing the web, responding to e-mail, instant messaging each other, and otherwise not devoting their full attention to the topic at hand they are doing themselves and their peers a major disservice.
- **Phones and wireless devices are turned off.** We've all heard the annoying ringing in the middle of a meeting. Not only is it not professional, it cuts off the flow of discussion when the search for the offender begins. When a true need to communicate with someone outside of class exists (e.g., for some medical need) please inform the professor prior to class.

Academic Dishonesty

I have no tolerance for acts of academic dishonesty. Such acts damage the reputation of the school and the degree and demean the honest efforts of the majority of students. The minimum penalty for an act of academic dishonesty will be a zero for that assignment or exam.

The responsibilities for both students and faculty with regard to the Honor System are described on <http://mba.mcombs.utexas.edu/students/academics/honor/index.asp> and on the final pages of this syllabus. As the instructor for this course, I agree to observe all the faculty responsibilities described therein. During Orientation, you signed the Honor Code Pledge. In doing so, you agreed to observe all of the student responsibilities of the Honor Code. If the application of the Honor System to this class and its assignments is unclear in any way, it is your responsibility to ask me for clarification.

Students with Disabilities

Upon request, the University of Texas at Austin provides appropriate academic accommodations for qualified students with disabilities. Services for Students with Disabilities (SSD) is housed in the Office of the Dean of Students, located on the fourth floor of the Student Services Building. Information on how to register, downloadable forms, including guidelines for documentation, accommodation request letters, and releases of information are available online at <http://deanofstudents.utexas.edu/ssd/index.php>. Please do not hesitate to contact SSD at (512) 471-6259, VP: (512) 232-2937 or via e-mail if you have any questions.

Class Schedule and Reading Assignments

You are required to read 2-4 articles for each class period. The readings should be done before the class assigned. For several of the articles, your classmates will have prepared a discussion paper which you should read before coming to class. Your goal should be to come to class prepared to discuss the topic with the required readings as a starting place for discussion. You are encouraged to use any material that you have access to in preparing for class discussion. There are numerous sources on the Internet for information about complexity theory. The reading packet is intended as a start, not as the end of insights into the topic. Use your imagination and your skills to enhance your sources of knowledge. Share your discoveries with the class so that we can all enjoy the fruits of your labor.
